

Install ApplmageLauncher

Open your terminal.

```
sudo apt install software-properties-common
```

For debian download the official .deb package for ApplmageLauncher:

```
wget  
https://github.com/TheAssassin/AppImageLauncher/releases/download/continuous/appimagelauncher_2.2.0-  
gha111.d9d4c73+bionic_amd64.deb
```

Now, try installing the downloaded package again using dpkg:

```
sudo dpkg -i appimagelauncher_2.2.0-gha111.d9d4c73+bionic_amd64.deb
```

If you encounter any missing dependency errors during the installation, you can try running:

```
sudo apt-get -f install
```

Once the installation is successful, you can update the desktop database:

```
update-desktop-database
```

This should install ApplmageLauncher on your Debian system.
